Contemporary Issues in ECCE Summer of 2019

Explosive growth in waste materials poses a global threat. Young children are the most affected because escalating waste degrades the earth, air, and water they inherit, compromises their health, and endangers their future. This course, located in the art studio, aims to help students explore new directions for the ECE field that rethink the Rs (recycling, reusing, reducing) and refigure young children's waste futures.

Format: Mixed Mode: On-line in May-June and four (7.5 hrs) days in the studio July 2, 3 4 and 5, 2019
